```
Instructions:
1. Run task_0a.py to generate the vector database if not
already generated.
2. Press Run All (or restart kernel and run all cells).
3. You will be prompted to provide input values.
```

```
- Task 1: Implement a program which, given (a) a query label,
l (b) a user selected feature space, and (c)
positive integer k, identifies and visualizes the most
relevant k images for the given label l, along with
their scores, under the selected feature space.
```

In [ ]:
```python
LABEL = input("Provide a valid label name / label ID present in the Caltech1

FEATURE_SPACE = input("Provide a feature space [color, hog, avgpool, layer3,
